I manage everything behind your game.

One person instead of a whole team you'd have to find, manage, and pay. Community, servers, testers, devs, the project itself, the marketing. 11+ games in now, across just about every genre, and I make the calls off real analytics and experience.

WHAT I DO

Direction

Everything below, run by one person.

Dev Management

Briefing devs and keeping the build on track.

Tester / QA

Real testers, real reports your devs can use.

Game Design

Turning an idea into something people play.

Planning

GDDs, roadmaps, and milestones people follow.

Project Management

Scope, timelines, and people, all moving.

Community & Server

Your Discord and your game, run as one.

Marketing & Creators

Launches, creators, and growth that converts.

Balancing

Drop rates, curves, and economy that hold up.

HOW WE CAN WORK TOGETHER

TIER 1 AUDIT

I review the whole game and hand your team a prioritized changelist.

TIER 2 MANAGEMENT

Everything in Audit, and I run your existing team through it.

TIER 3 DIRECTION

Everything in Management, and I assemble and direct the full team.

Pay is flexible: USD upfront, a percent of revenue, or both, set per game. Happy to sign a contract.
